EPIC MOS Monitoring
MOS Bad Pixel Monitoring
MOS Background Monitoring
MOS Serial CTI (Al)
MOS Parallel CTI (Al)
MOS2 Parallel CTI CCD1
Conclusions

Bad pixel situation is still stable on low level.

- Possible adjustment of background: decrease fixed-offset table of several CCDs by 1 ADU to compensate long-term drift.

- Serial CTI stable since cooling except MOS2 CCD7.

- Parallel CTI stable since cooling. Science ~rev. 700 parallel CTI nearly constant.

- Current CTI model still valid.
