

The X-ray Universe 2026

List of Posters

1	W.-R. Hamann	<i>The impact of X-rays on the model atmospheres of hot stars</i>
2	D. A. Vásquez Torres	<i>The impact of periastron passage on the X-ray and optical properties of the symbiotic system R Aquarii</i>
3	E. Racero	<i>UV catalogue of serendipitous asteroid observations with the Optical Monitor of XMM-Newton</i>
4	Y. Nazé	<i>Long and short-term behaviour of gamma Cas analogs</i>
5	A. Dobrotka	<i>Search for X-ray counterparts of optical mHz variability detected in nova-like cataclysmic variables by TESS</i>
6	N. La Palombara	<i>XMM-Newton confirms the persistent nature of the Be X-ray binary pulsar 4U 0728-25</i>
7	J. Brink	<i>Towards a Volume Limited Sample of CVs</i>
8	L. Ducci	<i>Hide and seek in NGC 4631: discovery of a new ultra-luminous X-ray pulsar with a rapid spin-up rate</i>
9	A. Akyuz	<i>Multiwavelength Study of Three ULXs in NGC 1792: Identification of a New Transient ULX and Constraints on Donor Stars</i>
10	K. G. Pradeep	<i>Charting CVs in the eROSITA sky: A Machine learning boosted Bayesian Framework for CV identification and characterization in all-sky X-ray surveys</i>
11	F. Di Salvo	<i>The Chandra-HETG spectrum of 4U 1746-37: hints for red- and blue-shifted high-velocity FeXXV and XXVI Absorption</i>
12	J. Kajava	<i>New intermediate-mass black hole candidates in extragalactic globular clusters</i>
13	I. Akkaya Oralhan	<i>Characterizing ULX Donor Stars in NGC 5643 through Photometry and Stellar Evolution Models</i>
14	G. Wiktorowicz	<i>Ultraluminous X-ray Sources in Globular Clusters</i>
15	A. Tamang	<i>Super-orbital period evolution of Hercules X-1</i>
16	Y. Ohshiro	<i>Energy shifts of iron K-shell emission lines in the intermediate polar EX Hydrae observed with XRISM</i>
17	J. J. Rodes Roca	<i>Variability of the emission lines during the eclipse-egress and out-of-eclipse in Cen X-3 with RGS</i>
18	R. Webbe	<i>X-ray Periodicities in the Gamma Cas Analogues</i>
19	F. Fogantini	<i>Resolved extreme ionization around Holmberg II X-1: a new view on ULX radiative feedback</i>
20	L. Ducci	<i>The Be/X-ray Binary A0538-66: A laboratory for extreme X-ray accretion physics</i>
21	S. Kara	<i>A 20-Year X-ray Spectral Analysis of the Ultraluminous X-ray Pulsar NGC 5907 ULX-1</i>
22	A. Ansar	<i>Low luminosity behaviour of BeXRBS: a systematic study using eROSITA</i>
23	M. Kumar	<i>From Spectral Properties to X-ray Reprocessing in ULXPs/ULXs: A Comparative Study with Galactic X-ray Binaries</i>
24	P. Ohja	<i>The Role of X-ray Irradiation in the Variability of Unstable Black hole Accretion disks</i>
25	G. Sanjurjo Ferrín	<i>Cen X-3: States and Transitions</i>
26	A. Agarwal	<i>Broadband X-ray study of low luminosity Intermediate Polars (LLIPs)</i>
27	K. Berger	<i>Flux-dependent behavior of the “10 keV feature” of 4U 0115+63</i>
28	A. Salganik	<i>Discovery of a 0.8-mHz quasi-periodic oscillation in the transient X-ray pulsar SXP31.0 and associated timing transitions</i>
29	A. Balu	<i>An SRG eROSITA Study of BeXRBS in Quiescence</i>
30	K. G. Pradeep	<i>Solving the Soft X-ray Puzzle Using XMM-Newton Observation of the Highest Field Polar AR UMa</i>
31	V. Cúneo	<i>XMM-Newton follow-up of eROSITA-discovered cataclysmic variables</i>
32	M. Yoshimoto	<i>Outburst from the slowest rotating X-ray pulsar AX J1910.7+0917 detected by XRISM/Xtend</i>

33	E. Şafak	<i>X-Ray Characterization of the Post-Nova Stage of V2487 Ophiuchi</i>
34	P. Plucinsky	<i>XRISM Observations of Cassiopeia A: Overview, Atomic Data, and Spectral Models</i>
35	H. Chen	<i>Chandra and XMM-Newton's X-ray Study on the Core-collapse Supernova Remnant N63A Embedded in an H II Region</i>
36	Y.-H. Chi	<i>A Complete X-ray View of Supernova Remnant W28 with Einstein Probe: Spatial distribution of parameters and origin of the thermal composite morphology</i>
37	O. Kargaltsev	<i>PSR J1740+1000, its X-ray PWN, and Pevatron 1LHAASO J1740+0948u: pulsar tail versus pulsar filament</i>
38	G. Pavlov	<i>The Lighthouse pulsar wind nebula: an extremely energetic electron/positron beam interacting with ISM</i>
39	J. Wang	<i>Diffuse Hot Gas in Star-forming Galaxies and (U)LIRGs: Scaling Relation and the Role of Stellar Feedback</i>
40	A. Pandya	<i>From stellar birth to stellar death: tracing high energy processes in Sh2-284/G213.0-0.6 complex</i>
41	K. Anastasopoulou	<i>Disentangling the Galactic centre X-ray reflection signal using XMM-Newton data</i>
42	N. Locatelli	<i>The X-ray luminosity function of stars observed with SRG/eROSITA</i>
43	J. Kurpas	<i>Growing the population of thermally emitting isolated neutron stars with SRG/eROSITA</i>
44	I. Psaradaki	<i>Dust and outflows in AGN: the case of NGC 6860</i>
45	S. Kraemer	<i>Mass Outflow in QSO2s: The Role of the X-ray Wind in Mrk 34</i>
46	K. Akhila	<i>Spectral-timing modelling of the energy-dependent X-ray variability in Mrk 335</i>
47	V. Pandolfi	<i>Machine learning methods for spectral-timing of AGN outflows</i>
48	F. Takisawa	<i>The X-ray spectral changes in highly variable AGNs</i>
49	O. Reich	<i>Physical Origin and Variability of AGN Ultra-Fast Outflows Observed with XRISM</i>
50	Y. Xu	<i>Nuclear and galactic ionized winds in a massive quiescent galaxy KUG 1208+386 hosting an obscured AGN</i>
51	K. Kouroumpatzakis	<i>A Universal X-ray–He II Correlation from Star-forming Galaxies to AGN</i>
52	A. Corral	<i>Probing Highly Accreting AGN in the Quasar Main Sequence Through Soft X-ray Excess and Bayesian Analysis</i>
53	R. Sato	<i>Probing the Geometry of Low-Ionization Ultra-Fast Outflows in PDS 456 through Soft X-ray Variability with XRISM and NuSTAR</i>
54	B. Coleman	<i>Cold, Bright, and Breaking the Rules: Finding Common Ground Between Cold Quasars and Typical AGN</i>
55	Y. Fukazawa	<i>X-ray and optical polarization of BL Lac objects with IXPE and Kanata telescope</i>
56	I. Klein	<i>XMM-Newton and Euclid observation of Galaxy Clusters in the Euclid Deep Fornax Field</i>
57	D.-W. Kim	<i>Hot Gas in Normal Galaxies</i>
58	A. Veronica	<i>Deep Dive into the Dancing Ghosts Cluster</i>
59	J. Dietl	<i>Uncovering the Giants in the Sky - Semantic Segmentation of Galaxy Clusters in Astrophysical Surveys</i>
60	Y. Zhao	<i>RGS analysis of cool-core galaxy cluster RXCJ 1539.5-8335</i>
61	J. Dietl	<i>The Outskirts of A3266: Infalling Groups, Filaments, and a Pre-Merger Cold Front</i>
62	Z. Ding	<i>Testing AGN Feedback Models using the Mass Content of eRASS1Galaxy Groups and Clusters</i>
63	D. Chatzgiannakis	<i>Are the effective iron yields in groups and clusters a real conundrum?</i>
64	A. Veronica	<i>The Sloshing Core of Abell 496</i>

65	S. Kara	<i>Chemical enrichment in ram-pressure stripped galaxies</i>
66	Y. Omiya	<i>Observations of the Prototypical Cold Front in Abell 3667</i>
67	Y. Zhao	<i>A Forecast of HUBS Observations of Inter-Cluster Filaments</i>
68	P. Stoecker	<i>The X-ray Universe at ultra-high resolution: the X-ray Interferometric Space Telescope</i>
69	G. Richardson	<i>Exploring Viscosity Effects in Accretion Disk Simulations: A Code Comparison Between FLASH and Athena</i>
70	S. Sheth	<i>Optimizing eRASS source detection for XDINS: towards a new eROSITA soft X-ray catalog</i>
71	D. Tubín-Arenas	<i>The SRG/eROSITA upper limits of the Galactic Western hemisphere</i>
72	I. Traulsen	<i>Spectrum-based source detection for XMM-Newton and beyond</i>
